Suitable for indoor
and outdoor use

- ✓ Insta 360 Pro
- ✓ Osmo Pocket
- ✓ GoPro
- ✓ D80
- ✓ Mavic 3T
- ✓ LAN / HDMI Datalink

- ✓ Full HD @ 50 fps
- ✓ Low latency
- ✓ Facebook
- ✓ YouTube
- ✓ X
- ✓ Instagram

- ✓ Custom colours
and branding
- ✓ RGB light show
- ✓ Skyscreen
- ✓ Extra-large banner

h-aero gives your event a whole new perspective

For the first time, **aerial photography and film sequences from entirely new perspectives** are possible – both indoors and outdoors.

The h-aero® system holds an RPAS-SORA certification and **may therefore be operated over crowds**. Its **redundant safety technology** and its **low take-off weight** of under 250 grams rule out damage to people, objects or the equipment carried on board. This makes it possible to **stage events safely**, without posing a safety risk. h-aero® enables continuous aerial monitoring and **secure real-time data transmission**.

Compared to camera cranes or spider cams, h-aero® is **more cost-efficient, more flexible and more versatile**.

Thanks to its flexible structure, the system can be transported fully assembled in small vans and launched within moments. Its patented plug-in system also means it can be **quickly dismantled and stored compactly**.

h-aero® – more flexibility, greater efficiency and new perspectives.

How the h-aero works:

Ultra-light components

- Outer skin: ripstop nylon
- Inside: helium-tight multilayer foil
- Carbon fibre

Payload

Full-stack onboard computer incl. software stack, batteries, solar cells and sensors that can be swapped out with a single click

What our software delivers:

- Hovering cybernetic data capture
- Data interpretation + cognitive capabilities
- Multi-channel communication
- 5G connectivity
- Low electromagnetic signature
- AI, IoT, Big Data
- Georeferenced
